Noorul Abraar Mohammed

AI Researcher

Miami, Florida | +16573649300 | noorul.abraar22@gmail.com mohammed.noorul@atlantisuniversity.edu | linkedin.com/in/inoorulxxi

Summary

I am an AI researcher with a strong background in **machine learning, deep learning, and data science**. I have hands-on experience in **process analysis, optimization, and quality assurance** from my role at Infor Technologies. With academic training in **Artificial Intelligence, Data Science and Mechanical Engineering**, I combine technical expertise with analytical thinking to design **intelligent models and data-driven solutions**. Skilled in **Python, Miro, Google Workspace, NetLogo and Figma**, I am passionate about research and innovation to advance the field of artificial intelligence and develop impactful solutions.

Work experience

INFOR Technologies Inc. **Jan 2018 - Jan 2020**

Process Associate

- Analyzed company processes to identify delays, bottlenecks, and operational weaknesses. Recommended process improvements to increase production efficiency and reduce operational costs.
- Reviewed and assessed production orders to ensure accurate workflow execution. Performed servicing, calibration, and maintenance of production equipment to prevent downtime.
- Diagnosed and resolved processing issues to maintain continuous production output. Managed and replenished machinery supply inventory to avoid material shortages.Reported production defects and non-conformities to Quality Assurance for corrective action.
- Ensured all production processes complied with safety, regulatory, and quality standards. Maintained a clean and obstruction-free production environment to ensure safe operations. Prepared detailed production process reports for management review and operational planning.

Education

Atlantis University **September 2025 - Present**

MS in Artificial Intelligence

- Planning and Search under Uncertainty: Create concept maps comparing deterministic and stochastic cases. Simulate BFS vs A* search in uncertain environments. Write reflective analysis on deterministic planning limitations. Develop robot navigation paths with probabilistic transitions. Visualize a Markov Chain in a real scenario.
- Ethics of AI: Apply an ethical decision-making framework to a real-world AI case study. Evaluate the strengths and weaknesses of self-regulation in AI governance. Identify and analyze global AI regulatory approaches and compliance requirements.

Wichita State University **July 2023 - Aug 2025**

MS in Computer Science

- Gained strong programming foundations in **C++ and object-oriented software development**, including data structures, algorithms, and programming paradigms.
- Developed hands-on experience in **computer networking, cybersecurity, and ethical hacking**, reinforced through practical labs and competitive assignments.
- Strengthened applied knowledge in **machine learning, AI, and data science**, including predictive modeling, neural networks, information retrieval, and real-world project execution.

JNTU-Hyderabad **Mar 2013 - Dec 2017**

BS in Mechanical Engineering

Project: Performance of Boilers and its Auxilaries and Behaviour of H-Bn metals on dry sliding water.

Skills

- **Machine Learning & Mathematics:**
  NumPy, Scikit-learn, SciPy
- **Deep Learning Development:**
  Python, PyTorch, TensorFlow
- **Research & Paper Reproduction:**
  arXiv, Papers With Code, Google Scholar
- **Experimentation & Workflow Management:**
  Jupyter, Colab, TensorBoard, MLflow, Git/GitHub
- **Scientific Documentation & Reporting:**
  LaTeX, Matplotlib, Plotly, Zotero
